## Bill Of Lading

One placard partially covered by a tie down strap and the appearance of a leaking drum prompted a police officer to pull a PK driver over for inspection. There was no leaking drum and the tie down strap was adjusted. During the inspection the Bill of Lading was discovered to be deficient, lacking accurate information for the Hazardous Materials on the truck.

1. Yard Superintendents are responsible to make sure that each truck they or their crews load - except for trucks with small loads of only beads and/or cones - has an accurate bill of lading.
2. The driver, during the pre-trip inspection, is required to make sure that the BOL is accurate and the proper placards are displayed and unobscured.
3. The shop administrative staff has current Generic BOL's for trucks that carry the same load all of the time and for trucks that carry different loads.

Here is an example of a BOL for a support truck carrying Haz-Mat Materials—Polyurea and Acetone:
